Problem

One of our key contractors was having a challenge with eye injuries to their workers who were changing light fixtures in areas with drop ceilings. While they were using eye protection, their traditional safety glasses were not providing the level of protection that was needed. Workers were regularly having dust from the ceiling tiles fall into their eyes as they looked up to perform their work.

Consideration

They needed something that would protect the entire eye area and provide a seal. This would greatly reduce the opportunity for dust to enter the eye region. We considered traditional goggles but they were bulky and not very comfortable to wear for long periods. We also considered a full face shield in addition to the safety glasses but that also proved to be a bulky and uncomfortable option.

Solution

What we found to be the perfect solution for this customer was the Pyramex V2G glasses, a hybrid safety glass/goggle. These safety glasses provided a superb seal around the eye and was very comfortable to wear for long periods. This product came with both arms, so they could be worn as traditional safety glasses, and an elastic strap, which allowed for a slightly tighter fit and a tighter seal.

The practice of actively engaging with customers on a regular basis and really listening to their concerns allows Quest to find the products that truly fit the safety needs of our customers.
